From	То	Model of Plane	First Class	Base Price	Business Class	Base Price	Economy Class	Base Price			
Source	Destination	Boeing 777- 200LR(77L)	8	20000	35	13000	195	6000			
Source	Destination	Airbus A319 V2	0	0	0	0	144	4000			
Source	Destination	Airbus A321	0	0	20	10000	152	5000			
			Everyday 10% extra of baseprice		Monday, Friday and Sunday. It's 40% more		First 40% - same base price				
			Opens 10 days before the booking		Only open 4 weeks before the journey		next 50% seats - 30% extra of base price				
							Last 10% - 60% extra of base price				

Basic application:
We will be giving basic application which has from location, to location, search button which displays the matching flights with the information flight number, from location and to location.

Story 1: Sto

Story 2:

As a traveller, When I give the departure date along with the from and to locations then search should display the flights which are starting on that date.

Case to consider: When I don't give departure date, search should work based on from and to locations.

Story 3:
As a traveller, When I give the class of travel(Economy, business class and First class) and the number of passengers then search should display the flights which can accomodate the passengers in that travel class.

# Cases to consider: class of travel is mandatory field

Story 4:
As a traveller, when I give the number of passengers, search should also give the cost of the booking.

Test Scenarios:
If the number of passengers to be travelled are 2 passengers, class of travel is "Economy" and the date of travel as "04-10-2016"
When "F0001" flight planned start is "04-10-2016" and the total number of availale seats are 195 and all of them are free and the base price for the seat is 6000.
Then the total booking amount should be 12000.

Story 5:
As a traveller, I would give Economy as travel class and number of passengers in search criteria. Then search results should display the total cost of booking based on below conditions.

Conditions:

Economy Travel class will be charged extra based on the filling rates of the seats. For example, first 40% seat bookings same base rate, next 50% seats will be charged 30% extra of base price. Last 10% seats will be charged 60% extra of base price

Test Scenarios:
If number of passengers to be travelled are 2 passengers, and the class is economy and the date of travel as "04-10-2016"
When "F0001" plane planned start is "04-10-2016" and the total number of seats are 195 and 100 of them already booked and the base price for the seat is 6000.
Then the total booking amount should be 15600.

Story 6: As a traveller, I would give Business as travel class and number of passengers in search criteria, then search results should display the total cost of booking based on below conditions. Business class will be charged 40% extra of base price if the travel is on Monday, Friday or Sunday.

Story 7: As a traveller, I would give First as travel class and number of passengers in search criteria, then search results should display the total cost of booking based on below conditions.

First class will be opened 10 days before the departure date and everyday the extra charge will be 10% more.
